HOME SAFE INSPECTION™

PLAY IT SAFE

Knowledge is power — the power to make an informed decision; the power to keep your family from harm; and the power to prevent potential, costly problems before they occur.

Making sure you have ALL the information you need to make the best purchasing decision is what our company, HOMESAFE, is all about.

THE HOMESAFE 3-STEP, ADVANCED INSPECTION PROGRAM

- 1. INFRARED INSPECTION** – Using advanced infrared technology, HomeSafe can literally see inside your walls, ceilings, floors and many other areas of your home not otherwise able to be observed.
- 2. TRADITIONAL VISUAL INSPECTION** – Following the infrared scan, HomeSafe inspectors provide a comprehensive sight inspection of your home, focusing on “suspicious” areas uncovered during the infrared scan. We also provide an inspection report within 48 hours after completion and personal consultation and referral services.
- 3. ACOUSTIC INSPECTION** – If the infrared scan detects signs of moisture pointing to termite activity, HomeSafe's technicians employ our listening sensors which can hear termites and other insects in the “suspicious” areas of your home.

HOMESAFE OFFERINGS INCLUDE:

ADVANCED HOME INSPECTIONS

INFRARED - Infrared scanning gives HomeSafe the power to see inside your home's walls, ceilings and floors and uncover problems that would be invisible to the naked eye

VISUAL - HomeSafe's highly trained professionals perform an in-depth sight inspection focusing on "suspicious" areas detected by the infrared scan

ACOUSTIC - Our highly sensitive listening devices "hear" termite noises that the human ear can't detect

PLUS: SPECIALIZED SERVICES, INCLUDING:

- Energy Loss Inspection Program
- Radon Inspection
- Maintenance Inspection
- Pre-Renovation Inspection
- Course of Construction Inspection
- Legal Dispute Inspection
- Water Leakage Detection
